Editor and Reviewer comments:

Reviewer's Responses to Questions

Note: In order to effectively convey your recommendations for improvement to the author(s), and help editors make well-

informed and efficient decisions, we ask you to answer the following specific questions about the manuscript and provide additional suggestions where appropriate.
1. Are the objectives and the rationale of the study clearly stated?
Please provide suggestions to the author(s) on how to improve the clarity of the objectives and rationale of the study. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: The article presents an interesting and relevant topic.
The objective of the article and the relevance of the research are described in the Introduction.

Reviewer #2: this is an very interesting topic, the author clearly stated the rationale of the study and the objectives.

2. If applicable, is the application/theory/method/study reported in sufficient detail to allow for its replicability and/or reproducibility?
Please provide suggestions to the author(s) on how to improve the replicability/reproducibility of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes No N/A
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:

Provide further comments here:

The structure of this paper is clear. The Norm activation theory has been applied in this study as the theoretical foundation. However, I would like to see a better explanation about why use this theory, and how can this theory support this paper. In the introduction section, there are two paragraphs discussed the NAT theory which is great. However, it would be better to move them to the literature review section.

3. If applicable, are statistical analyses, controls, sampling mechanism, and statistical reporting (e.g., P-values, CIs, effect sizes) appropriate and well described?
Please clearly indicate if the manuscript requires additional peer review by a statistician. Kindly provide suggestions to the author(s) on how to improve the statistical analyses, controls, sampling mechanism, or statistical reporting. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes No N/A
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:
Yes No N/A
Provide further comments here:
The methods and findings are very clear.

4. Could the manuscript benefit from additional tables or figures, or from improving or removing (some of the) existing ones?
Please provide specific suggestions for improvements, removals, or additions of figures or tables. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: I missed the figure of the theoretical model with the relationships of the hypotheses.

Reviewer #2: It would be better to conduct a research model based on the NAT which shows the relationship among the variables.

5. If applicable, are the interpretation of results and study conclusions supported by the data?
Please provide suggestions (if needed) to the author(s) on how to improve, tone down, or expand the study interpretations/conclusions. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes No N/A
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:

Yes No N/A

Provide further comments here:

The interpretation of results is generally ok. However, in the discussion section, I would like to see more connections between the findings and previous studies.

For instance, in page 12, the author said, "the personal norm is not supported by adequate empirical data in mediating the indirect effect of awareness of consequences on intentions. This shows that the ascription of responsibility is an essential factor in shaping the personal norm, which ultimately has an essential mediating role. " It would be better to explain why, and if this results in line with or contrast to previous studies?

6. Have the authors clearly emphasized the strengths of their study/theory/methods/argument?

Please provide suggestions to the author(s) on how to better emphasize the strengths of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: The main contributions of the research can be better worked on in the conclusion of the study.

Reviewer #2: In the conclusion section, the author should further discussed the theoretical contribution.

For instance, in page 13, the finding of this study shows that "the results showed that the personal norm becomes active when formed by the ascription of responsibility rather than by the awareness of consequences." and "Personal norm is not only able to form intentions directly but also has an important role in mediating the effect of the ascription of responsibility on intentions. " How can these findings contribute existing literature?

7. Have the authors clearly stated the limitations of their study/theory/methods/argument?

Please list the limitations that the author(s) need to add or emphasize. Please number each limitation so that author(s) can more easily respond.

Reviewer #1: Research limitations need to be presented more clearly.

Reviewer #2: The authors have clearly stated the limitations of their study.

8. Does the manuscript structure, flow or writing need improving (e.g., the addition of subheadings, shortening of text, reorganization of sections, or moving details from one section to another)?

Please provide suggestions to the author(s) on how to improve the manuscript structure and flow. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: I suggest that the theoretical model of the research be included.

Reviewer #2: The manuscript structure is clear, however, I would like to see an addition of subheading (NAT) in the literature review section to better explain the theory.

9. Could the manuscript benefit from language editing?

Reviewer #1: No

Reviewer #2: Yes

Reviewer #1: The article presents an interesting and relevant topic. The objective of the article and the relevance of the research are described in the Introduction. I missed the figure of the theoretical model with the relationships of the hypotheses.

The main contributions of the research can be better worked on in the conclusion of the study.
Research limitations need to be presented more clearly.
I suggest that the theoretical model of the research be included.

Reviewer #2: This field is optional. If you have any additional suggestions beyond those relevant to the questions above, please number and list them here.
